Financial Accounting
Contemporary financial accounting and reporting systems; emphasizes the interpretation and evaluation of a company’s external financial reports.

Statistics for Managers
Fundamentals of statistical analysis to aid management decision making.

Managerial Economics
Applies microeconomic analysis to managerial decision making in areas of demand, production, cost, and pricing. Evaluates competitive strategies.

Managerial Finance
Develops analytical techniques and financial theories used to make optimal decisions in a corporate setting.

Investment Strategies
Introduces theories and practices of the investment process. Covers the fundamental principals and applications of modern portfolio theory, risk-return relation, asset pricing models, investment performance evaluation, and stock and bond valuation.

Derivatives
Covers options, forward contracts, futures contracts, and swaps. Provides a good knowledge of how these contracts work, how they are used, and how they are priced.

Fixed Income
Describes important fixed income securities and markets, and develops tools for valuing fixed income securities and managing interest rate risk. Covers traditional bonds and term structure concepts as well as fixed income derivatives and interest rate modeling.

International Finance
Examines the financial issues of an international investment decision. Main topics include foreign exchange market, investment alternatives in the international capital markets, and the management of foreign exchange risk.

Advanced Corporate Finance
Studies major decision-making areas and selected topics in corporate finance. Attempts to develop decision-making ability in these areas using both lectures & cases.

Entrepreneurial Finance
The objective of this course is to provide an overview of the economics and institutions involved in entrepreneurial finance. Our focus will be on the financing of new ventures. The class will consist primarily of case analysis, supplemented with in-class exercises and lecture material.

Risk Management in Banks and Financial Institutions
The objective of this course is to provide students with a risk management view of financial institutions (or financial intermediaries). Traditionally, banking courses have focused on an overview of the financial services industry, sector by sector, concentrating on balance sheet presentations and overlooking management decision making and risk management. In contrast, this course will emphasize a risk management approach.

Finance Capstone
The objective of this course is to provide students with a culminating experience as a step in completing the degree.

The course applies finance principles related to the investment, risk management, and financing policies of the firm to develop decision-making ability in these areas. Analysis of finance problems through selected readings and case studies will be emphasized.
